

# You don't like hot works? NEITHER DO WE!

## THE ALTERNATIVE TO WELDING

C-Claw® S-300 is a 300kg capacity fastener designed for marine environments using a cold process controlled installation. It is non-intrusive (no holes), quickly installed (6 min with 1 person), cost-effective, durable (35 years), and reliable.

C-Claw S-300 offers greater flexibility in terms of SIMOPS (simultaneous operations) for offshore structural maintenance and life extension.

This 60 mm diameter anchor is a must for all your cables trays campaign & all small maintenance operations (instrumentation, small pipe support, electrical cabinet, etc...).

**Don't skimp on the small stuff:** neglecting equipment and maintenance can be a costly mistake !

## A REVOLUTIONARY FASTENING

The class certified adhesive bonding process is controlled through a power tool that offers a perfect command of the environmental parameters in harsh “industrial” conditions. The power tool is light (< 5kg), easily transportable and compatible with rope access.

Thanks to C-CLAW® S-300

- you save time & POB,
- you can intervene during live production,
- you reduce risks!
