

COLD PAD - new co-development for static pressure equipment & large process piping

24 July 2017 – **TOTAL E&P RECHERCHE & DEVELOPPEMENT** and **COLD PAD** have entered a new co-development program. The main focus will be the life extension of static pressure equipment and large process piping.

The co-development will be based on a cold work solution and should take about 1.5 years. This intends to be a new tool for operators to shift structural maintenance from planned shutdowns to general maintenance in ATEX environments with no hot works.
